

Warehouse Safety Incident Reporting Procedure

Company: Summit Logistics | Doc ID: WHSE-SAF-019 | Version: 1.8 | Effective: 2026-02-28 | Owner: EHS Department

Purpose & scope

Defines immediate actions and reporting requirements for Summit Logistics warehouse associates and team leads following injuries, near-misses, equipment damage, and hazardous material spills at all distribution centers.

Key terms

Near-miss: Event that could have caused injury but did not — must be reported within 24 hours.

First report of injury (FROI): HR form initiated within 24 hours of recordable injury.

Lockout/tagout (LOTO): Required before any repair on powered industrial trucks or conveyor.

Standard procedure

1. Ensure scene safe — do not move injured person unless immediate danger (fire, collapse).
2. Call site emergency line ext. 991; provide bay number, injury type, number of people involved.
3. Designate one person to meet ambulance at main dock door; clear path of pallets and forklifts.
4. Preserve scene: do not operate equipment involved until EHS photos complete except life safety.
5. Team lead completes Incident Report Form IR-WH within 2 hours; witness statements same shift.
6. For near-miss: submit Near-Miss Card in kiosk — no injury required.

Approved phrases (radio / in-person)

- "Bay 14 medical — need first aid and supervisor to aisle J-220. One associate, possible ankle injury."
- "All forklifts hold in zone C until further notice — spill cleanup in progress."
- "I'm documenting a near-miss: almost struck by reversing truck at blind corner — mirrors needed."
- "LOTO confirmed on conveyor 7 — maintenance may begin."

Scenarios

- Scenario A — Forklift vs. rack scrape: No injury; rack damaged. Operator stops, tags area, notifies lead. EHS inspects rack integrity before aisle reopens.
- Scenario B — Associate slip on leaking hydraulic fluid: Minor knee injury. First aid on site; FROI initiated; spill kit deployed; area barricaded until dry.
- Scenario C — Near-miss at pedestrian crossing: Walker almost hit — horn not sounded. Near-miss card filed; safety stand-down scheduled next shift start.

Escalation matrix

Severity	Notify within
First aid only	Team lead + EHS same day
Recordable injury	Site manager + HR within 4 hours
Hospitalization	Regional EHS + OSHA prep within 8 hours
Hazmat release	Evacuate per SDS; fire dept + EHS immediately

Do / Don't

- Do: Wear hi-vis vest in dock; honk at blind corners; report equipment defects before shift use.
- Don't: Clean blood without training kit; restart equipment to "test" after incident; discourage near-miss reporting to protect metrics.
